Super II

Interior Waterborne 100% Acrylic

Cloverdale Paint's Super II Acrylic features superior flow & levelling characteristics and better washability and stain resistance compared to ordinary paints. Professional painters will recognize and appreciate Super II's slightly lower "velvet-like" eggshell sheen and "best in class" touch up characteristics. Super II is a high performance finish for institutional, commercial and residential applications. Ideal for new housing construction where improved washability is required. Excellent for use on walls, doors, woodwork and trim.

Super II is formulated to meet and exceed MPI (Master Painter Institute) "high performance" category certification approvals and is recognized for Canadian Food Inspection Agency "No Objection Status" for all registered establishments.

"Over the years, I've built the good reputation of my business by not taking shortcuts and using quality paint. After a job is completed, my customers expect the walls and trim I've painted to wash well and stand up to everyday bumps and scuffs. That's why I use Super II from Cloverdale Paint."

"My name depends on it."

Making a Case for Quality Paints

Most paint can be made to look good when applied by professionals. However, all paints are not equal in terms of washability, burnish and stain resistance and colour encapsulation when washing walls painted with darker colours. Professional applicators may also find higher quality products have less expensive application costs where improved flow and levelling contribute to maximum hiding and spread rate coverage.

Lesser expensive paint products used and the method in which they are applied can be a component of a painting project where the builder or home owners are less informed or directly involved with the management of product choice and application specifications.

Ironically, paint can be one of the higher profile sources for customer dissatisfaction after the paint job is completed and the end users are living with their newly painted walls.

The relatively small savings in using lesser expensive paint for new home construction or residential re-paints can significantly add to customer dissatisfaction and the costs associated with it.

Super II waterborne acrylic is the "go to" coating for professional painters who prefer to use a level of product quality that ensures maximum application performance and guaranteed customer satisfaction.
